

Why choose dedicated server?

A dedicated server is best in control, security and power. With having a dedicated server, you will not need to share your resources with other clients. Here are some major reasons of choosing a dedicated server from hostgw.

1. Better value for your money

Dedicated servers are said to be the most lucrative option. It also give you the better value for your money. Since it may seem to be more costly as compared to cloud-based server, dedicated server provides an increased amount of resources, plus the rate is very affordable as soon as you understand the real value provided by this solution. Dedicated server companies deals with everything from creating and up keeping the server gear, and it's their duty to solve any problems if anything goes wrong. Usually, this kind of web hosting gives all the perks of a domestic server without the problem of really buying and maintaining a server on your own.

2. Better performance

A good dedicated server gives an isolated and unique platform without conflict for resources. It is only available for your personal and your business's use. This implies that your [dedicated server](#) will run more efficiently and faster as compared to cloud-based option, which isn't private. Remember that the plenty of cloud-based servers are made to provide you more storage capacity than more competent storage. Hence, if you are seeking a high-performing solution, you should choose a dedicated server.

3. Security

On web hosting environments that cover operation details under layers of technology the user has no insight into or control over, it's hard to create an optimally safe web hosting platform. You just don't get to know what software or hardware is being employed. But, with dedicated server, you will have total information about the software stack. Also, you will be happy to know the truth that the single thing under their control is the network interface and bare metal.

4. Easily customisable

There is too much of flexibility in what you can perform with dedicated server. It's actually a customisable option, which is what you require as a varying and growing business. For instance, your dedicated server can easily be employed to organize custom virtualisation platforms plus promote virtual networks and machines. This implies that your business has the capability to build individual virtual machines, each of which is capable to perform its own software platform. You can customise your hosting services in more different ways to suit the requirement of your business.
